Problem

Colored Water

Solution

Colored Water (clear green/brown/yellow tint with no algae) has generally two causes - dissolved metals or a high organic content in the water. Follow these steps for sparkling clear water:

- Step 1** Take a sample of the water to your authorized poolife® Dealer for a full analysis.
- Step 2** If metals are detected, add either [poolife® Stain Stop](#) or [poolife® Intensive Stain Prevention™](#) product per label directions.
- Step 3** If a high organic content is suspected, shock the pool with [poolife® TurboShock® shock treatment](#) or [poolife® Rapid Shock® shock treatment](#) per label directions. Remember to wait until the free chlorine level has dropped to between 1 - 4 ppm before reentering the pool.
