

Our Scale Deposits Problem Recommendations Are Below!

Please see our step by step solution and recommended products below. You can shop products online, [download a pdf](#) of this page or [print a shopping list](#) that you can bring in store to help find what you need.

Problem

Scale Deposits

Solution

Scale deposits (usually in the form of white, gray or brownish chalky deposits on pool walls and fixtures) are the precipitate that forms as a result of unbalanced water. This could be a high pH, high total alkalinity, high calcium hardness and/or a combination thereof.

Take a sample of your pool water to your authorized poolife® Dealer for a full analysis. Balance your water according to your dealer's recommendations. To avoid further scaling take a sample of the pool water to your poolife® Dealer each month for a detailed analysis.

Use [poolife® Tile Cleaner Rx](#) to remove scale deposits on all pool surfaces. Add [poolife® Intensive Stain Prevention](#) weekly to keep scaling from occurring.
