Problem

Eye / Skin Irritation

Solution

There's nothing worse than swimming in a pool and experiencing painful eye irritation while doing so. While more common in chlorinated swimming pool environments, BAQUACIL® pool products are much less likely to cause eye and skin irritation. However, if these conditions occur, test your pH level and adjust to 7.2 - 7.8. If the water is in balance, but the [BAQUACIL® Swimming Pool Sanitizer and Algistat](#) level exceeds 50 ppm, you should allow the level to come down by either waiting a few days or adding some make-up water to help dilute the level. Do not add [BAQUACIL® Swimming Pool Sanitizer and Algistat](#) until the [BAQUACIL® 4-Way Test Strips](#) indicate the need to do so (<40 ppm). As always, consult your Authorized BAQUACIL® Dealer.
